## Powerful. Colorful. Wonderful. CL-S1200

The seamless screen with a wide area of 30.9 inches and a high resolution of 12 million pixels reduces the load of eye movement and provides a comfortable diagnostic imaging environment. Not only two windows side-by-side for mammography images but also other various images such as CT, MRI, ultrasound and pathology can be displayed, and it is free to arrange the layout of windows.

## Stable color

The stabilization system for luminance and color temperature can automatically adjust luminance and color temperature in real time. The built-in Color Front Sensor on the screen realizes constant measurement of color temperature and adjusts the color temperature changes due to long-term use that the movable front sensor cannot.

- A medical monitor usually comes with high luminance which is not comfortable for text reading. With Auto Text Mode, brightness is automatically adjusted on patient lists and reporting applications to reduce eye strain.

## Focus on details

Using Visual Point Mode, you can focus on the detail where you want to see. (4 options of area shape)
It can also be used in combination with the Turbo Luminance function.

## One monitor. Multi image.

The Dynamic Gamma function (patented No. 6277984) can automatically identify pixels of monochrome and color images to display each of them in the optimum gradation. Various color images such as ultrasound, endoscope, pathology and nuclear medicine are displayed optimally with simple operations in real time. Auto Config Select function can read the DICOM information of images to switch the configuration at the best performance*.
*Auto Config Select function needs to be supported by viewer

## 12 Megapixel 30.9" Color Monitor

## CL-S1200

## I Eye-comfort

The built-in Rear Light provides an eye-friendly environmental illuminance as indirect lighting, and the built-in Reading Light illuminates the keyboard and mouse. The brightness of both lights can be adjustable to support working in the dark room.

## IEasy to keep clean and hygienic

An anti-reflection glass filter covers the surface of LCD. "Noiseless design" with few irregularities and gaps along with the wide-angle swivel, it is easy to wipe the main body to keep clean and hygienic.

## I Simple wire management

CL-S1200 can display 12-megapixel high resolution image with single DisplayPort 1.4a cable*. It's also applicable for two cables of DisplayPort 1.2. Owing to the DisplayPort, daisy chains can be realized for simple wiring connections. In addition, a wire hole in the stand helps to reduce the load on the cable and raise, lower, rotate the screen smoothly.
*Special Graphics card is needed.

I Advanced Features

- Protective Glass Filter
- Reading Light / Rear Light
- LED Indicator / Front Buttons
- Built-in Sensor
- Space Saving
- Wire Management / DisplayPort Daisy Chains - DICOM
